**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1, 4-15, 18-28 and 31-32 are allowed.

***Reason for Allowance***

2. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach the following:

In regards to claim 1 the prior art does not teach the network manager specifying a threshold corresponding to a maximum number of failure-related cross-connections at a node in the network; and the network manager mapping each of the one or more demands onto a primary path and a restoration path in the network to generate a path plan for the one or more demands in the network, wherein: reduction of a portion of restoration time associated with failure-related cross-connections in the network is taken into account during the mapping; the mapping generates the path plan based on the specified threshold such that, for all nodes in the mesh network, the number of failure-related cross-connections at each node is no more than the specified threshold, and the mapping results in a maximum number of failure-related cross-connections at all nodes in the network being within a specified tolerance of a theoretical minimum.

In regards to claim 15 the prior art does not teach means for specifying a threshold corresponding to a maximum number of failure-related cross-connections at a node in the network; and means for mapping each of the one or more demands onto a primary path and a restoration path in the network to generate a path plan for the one or more demands in the network, wherein: reduction of a portion of restoration time

associated with failure-related cross-connections in the network is taken into account during the mapping; the means for mapping generates the path plan based on the specified threshold such that, for all nodes in the mesh network, the number of failure-related cross-connections at each node is no more than the specified threshold, and the path plan results in a maximum number of failure-related cross-connections at all nodes in the network being within a specified tolerance of a theoretical minimum.

In regards to claim 31 the prior art does not teach the network manager specifying a threshold corresponding to a maximum number of failure-related cross-connections at a node in the network; and the network manager mapping each of the one or more demands onto a primary path and a restoration path in the network to generate a path plan for the one or more demands in the network, wherein: reduction of a portion of restoration time associated with failure-related cross-connections in the network is taken into account during the mapping; the mapping generates the path plan based on the specified threshold such that, for all nodes in the mesh network, the number of failure-related cross-connections at each node is no more than the specified threshold; and the mapping sequentially evaluates each possible path plan for each of the one or more demands and selects the path plan having a smallest maximum number of failure-related cross-connections.

In regards to claim 32 the prior art does not teach means for specifying a threshold corresponding to a maximum number of failure-related cross-connections at a node in the network; and means for mapping each of the one or more demands onto a primary path and a restoration path in the network to generate a path plan for the one

or more demands in the network, wherein: reduction of a portion of restoration time associated with failure-related cross-connections in the network is taken into account during the mapping; the means for mapping generates the path plan based on the specified threshold such that, for all nodes in the mesh network, the number of failure-related cross-connections at each node is no more than the specified threshold; and the network manager comprises means for sequentially evaluating each possible path plan for each of the one or more demands and means for selecting the path plan having a smallest maximum number of failure-related cross-connections.

The prior art alone or in combination fails to jointly suggest or teach the claimed combination of features as taught by the instant application. Therefore claims 1, 4-15, 18-28 and 31-32 are to be deemed allowable over prior art.
